

Changing Sump Pump Connections:

If your sump pump is connected to any other pipe in your home, it is most likely connected incorrectly to the city sewer system. The pipe from your basement sump pump should always discharge directly into your yard or storm sewer.

Water should be directed into your yard away from your home so that it doesn't puddle along the wall and seep back into your basement. Be sure the pump discharges are not directed onto your neighboring properties.

Sump pump disconnections are often more complex and the cost associated with the disconnections will vary. You must be familiar with plumbing or electrical work to disconnect a sump pump. Your plumber or home improvement professional can give you an estimate to do the work.
